

Could you have hepatitis C?

Hepatitis C is spread by blood-to-blood contact with someone who has the hepatitis C virus.

Have you....

Shared equipment when using drugs?

Had a blood transfusion before Sep' 1991 or a blood product before 1986?

Had dental or medical treatment abroad in unsterile conditions?

Not been tested after a needle stick injury?

Had a piercing, tattoo, electrolysis, semi-permanent make up or acupuncture using equipment not sterilised?

Had unprotected sex (with possibility of blood-to-blood contact) with someone who may have had hepatitis C

If untreated, hepatitis C can lead to liver disease, cancer and death. It can be cured with simple treatment.
